

Modern Cloud-Based Security

Featuring Ava® and Feenics™

CM3 builds systems that leverage the best, most reliable technology that adapts to your unique needs and integrates with various 3rd party products to provide a comprehensive security solution. Easily deploy with an open-systems approach for future expansion and flexibility.

The systems and solutions we recommend are proactive, not reactive, designed to deliver security before it is needed. We proudly install and integrate cloud-based security solutions from Ava and Feenics.

Proactive Security

Using video analytics and artificial intelligence on your cameras provides instant detection of threats and anomalies while providing real time notifications.

Connecting the Dots With Alerts

If door is propped open or authorization fails – map view shows location and image in real-time.

Modern Remote Management

Monitor and control your access control and video surveillance system remotely from your web browser or mobile device without compromising security.

Find Things Faster

When a crisis occurs, every second counts. Artificial intelligence allows the user to search faster and more accurately across multiple cameras, buildings, or sites, and reduces burdens on security team.

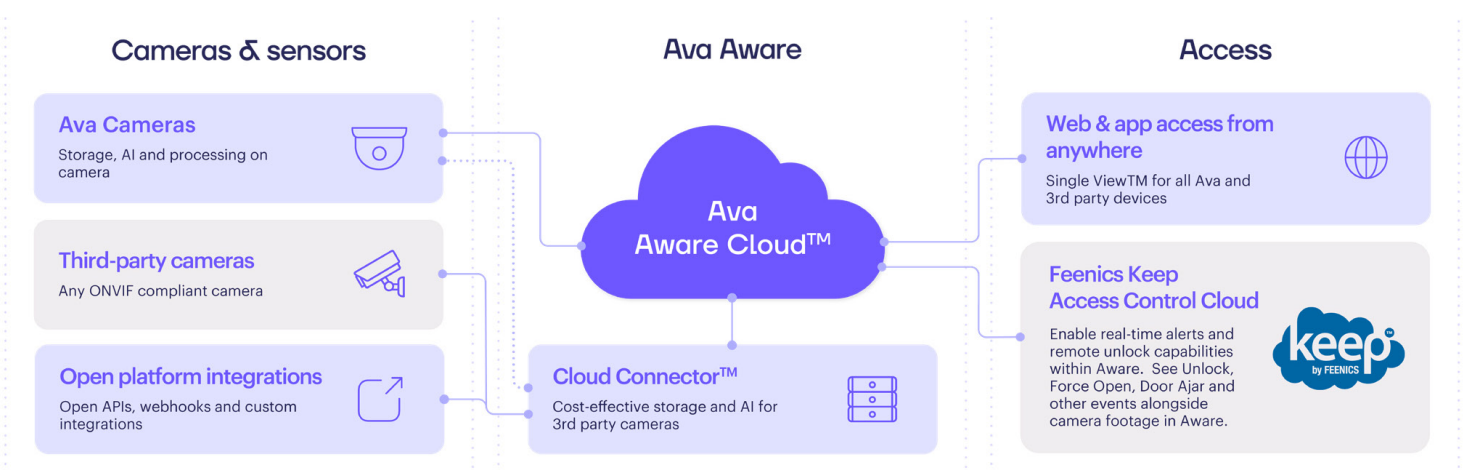

Scalable

No system is too small or too big. Ava and Feenics provide the ability to expand your system one camera or door at a time without the headache and cost of upgrading servers and hardware.

Simplicity

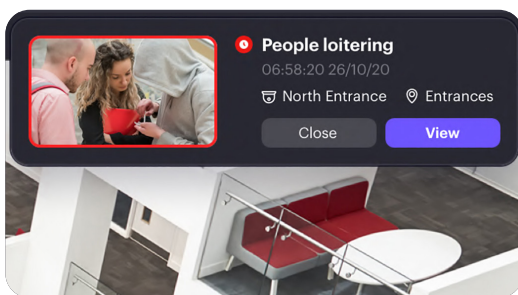

Feenics monitors the health of the system 24 x 7 and proactively alerts customers in the event of the failure.

SIMPLE, OPEN, AND SCALABLE SECURITY

AVA CLOUD-BASED VIDEO SURVEILLANCE

Monitoring campuses to protect students, educators, parents, and staff means balancing proactive measures with an effective response to incidents. Ava helps you identify unwanted events like vandalism, intrusion, loitering, parking violations, or people involved in suspicious acts so that you can focus on what truly matters, delivering positive academic experiences

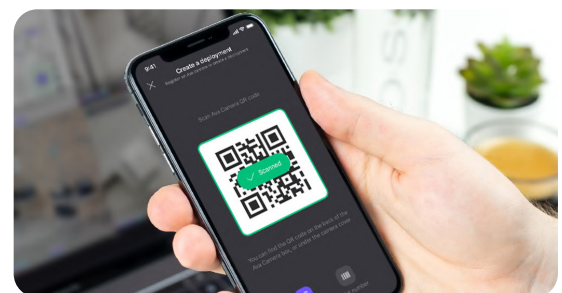

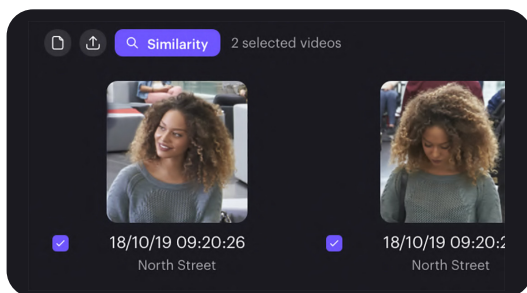

Detect anomalous behavior in real time

Powered by Spotlight, the dynamic video view with instant notifications draws attention to the relevant video feeds with potential risks. Identify intruder break-ins, loitering, guns, or unauthorized vehicles in real-time. Your operators can switch between live and playback with the click of a button. Gain additional insights via Ava's audio detection to identify sound patterns and get alerted in real time.

Increase situational awareness

Smart Presence™ depicts people as dots on maps and live footage of persons of interest. Combine with access control solutions to monitor hallways for a complete picture of loitering, theft, or even active shooter scenarios. Gain insights through occupancy counting and heatmaps in classrooms, libraries, and other communal areas for better energy efficiency and social distancing compliance.

Search accurately in minutes

Ava's Smart Search™ allows your operators to search by appearance, events, objects, similarity, or image. Recovering lost or stolen objects, such as laptops or vehicles, identifying suspicious people inside or just outside campus, or locating missing students now take minutes instead of hours. With the same or fewer resources, your operators can provide compelling evidence and mitigate liability risks.

Keep it simple

We designed our cloud-based video security solution for overall simplicity and readiness for deployment. Ava Cameras have a plug-and-play configuration that removes the need for usernames, passwords, pre-configuration set-up, or default settings. Scan the unique QR codes on the security cameras to onboard them to the Aware Cloud video management system.

KEY BENEFITS, DELIVERED

Build from existing investment while retaining privacy

- » Make existing third-party cameras smart
- » Add access control to extend capabilities
- » Video & metadata storage remain on-premises
- » Full site survivability and local access

Save storage and money

- » Dynamically vary the bitrate within a stream based on object detection
- » Use less storage and bandwidth on playback while keeping the quality where and when you need it intelligently
- » Up to 200 cameras per Ava appliance - small footprint support for larger facilities

Safe and welcoming environment

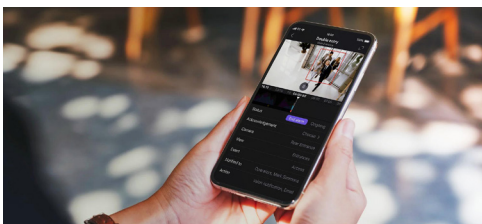

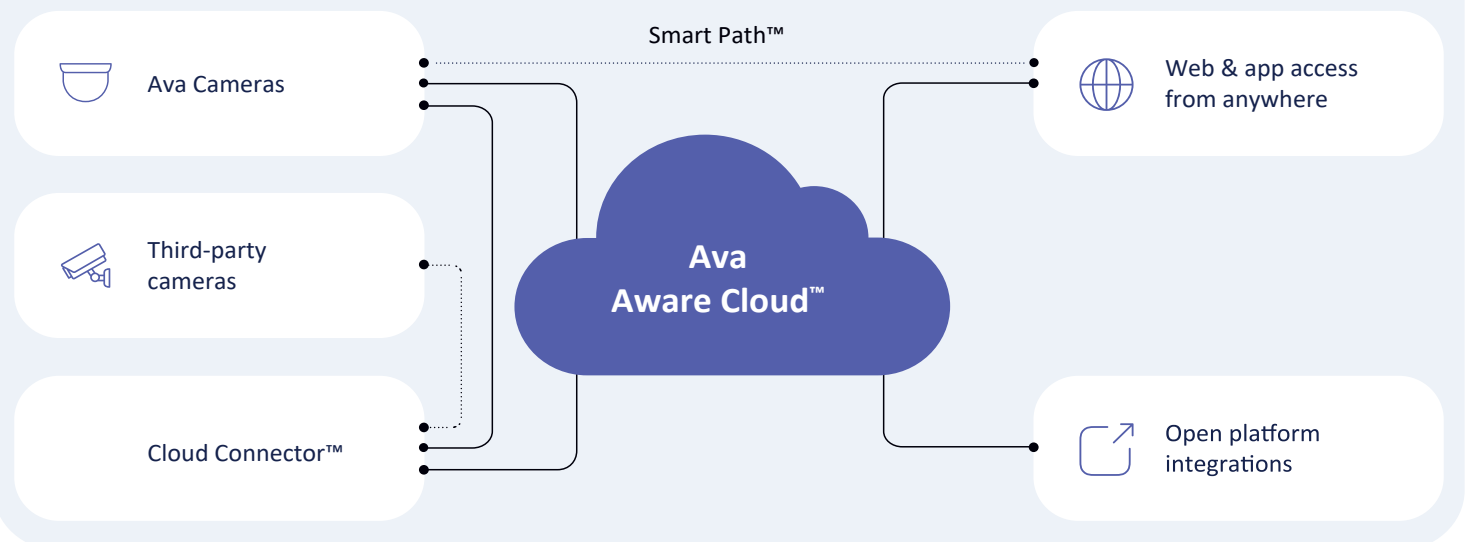

- » Capture every detail at all times with discreet security cameras
- » Increase your situational awareness
- » Enable preventative action through immediate response time

Secure and fast collaboration

- » Access live feeds and recordings securely from anywhere
- » Share video links with law enforcement authorities to facilitate ease of investigations
- » Maintain the integrity of records with video watermarking

The Solution - Simple, Open, and Scalable Video Security

Simple and flexible licensing

With a simple licensing model, services and software upgrades are included. You no longer have to worry about integration charges, operator charges, API fees, or the complexity between small, medium, large, and enterprise services.

FEENICS: CLOUD-BASED CONTROL

Solution Profile

Keep by Feenics™ is the industry's most secure and flexible **cloud-based, enterprise class, access control solution** that can be accessed anywhere there is an Internet connection using a simple user interface.

Modernize your school security

Whether it's the open nature of school grounds, the free flow of children, staff, and teachers or the daily influx of visitors, Feenics provides an **all-in-one proven solution** for the unique challenges educational organizations face when architecting a safe learning environment.

Award winning Keep by Feenics is built on open architecture hardware and fortified by the **security, disaster recovery and redundancy** of Amazon Web Services.

Keep gives you the ultimate in choice to manage your security infrastructure, integrate 3rd party applications and **reduce capital expenditure**.

Keep allows you to leverage today's tools while ensuring your cloud-based access control solution is **future-proofed** as new technologies are introduced.

Cyber Hardened, Independent Verification

In addition to traditional security challenges, new concerns are emerging around cyber security, privacy rights, identity management, and how to leverage all the collected data.

Keep incorporates multiple layers of security and privacy protection to safeguard your information and ensure maximum system security from system login to trusted field devices. We validate our security posture through the use of independent companies who specialize in **penetration testing and identifying code vulnerabilities**.

40% ROI Cost Savings

30% Operational Efficiencies Boost

Keep's subscription-based model means you'll have **no upfront costs to bear**, no computer hardware to purchase, and no software or maintenance contracts to sign.

Keep allows you to **cost efficiently** migrate of traditional infrastructure and increase your operational effectiveness all of which frees you up to focus on your constituents.

Always On, Never Out of Date

Software updates are automatic so **your system is always up to date**. No scheduled downtime is ever required.

Security Toolkit

- » Access Control (SaaS)
- » Visitor Management
- » Single Click Lockdowns
- » Mass Notification
- » Contact Tracing
- » Mustering / Roll Call Event Management
- » 'Snow Day' Door Controls
- » Web Client and Mobile App
- » Advanced Reporting:
 - » Incident Reporting
 - » Predictive Analytics
- » Custom Floorplans
- » Holiday Generator
- » Integrated Video
- » Mobile Credentials

Value Feenics Delivers for You

- » Integrates and consolidates your existing solutions
- » Remote / mobile monitoring
- » Integrates with leading manufacturers of wireless locks, video management platforms and intrusion detection systems
- » Lockdown your buildings from anywhere using your phone or laptop and send important notifications or instructions to students and staff
- » Provides a scalable system to support your expansion plans
- » Multi-factor authentication for enhanced password protection
- » Native Visitor Management tracks parents, contractors, and other visitors to your school
- » Provides a REST Based API that gives you integration & customization flexibility
- » Integrates with Microsoft AD & other school registration systems
