

INTEGRATED SECURITY & SMART APARTMENT SYSTEM

Access + Video

Automatically associate video footage with access events, alerts, and motion.

Elevator Room

Secure people and property by controlling elevator access to specific floors based on the permissions assigned to them. Visitors can be assigned temporary access to select floors for a defined time period

Smart Home

Enhance tenant lifestyle, convenience, and comfort with smart lighting, smart thermostats, and sensors

Guest / Visitor Access

Create and send mobile guest passes with a text or email to provide temporary or scheduled access for friends, family, and trusted service providers while still providing an audit trail of every visitor

Keyless Credentials

Eliminate physical keys and extend building access from the front door to apartment entry with a keyless door-to-door tenant experience via pin, smartphone, or RFID credential

Package Rooms

Manage package deliveries by allowing couriers to call the property management office or use an access control credential to gain access to the building. Pair with video surveillance cameras for real-time and recorded visual insights

Self-Guided Tours

See and speak with prospective tenants remotely while granting them access to the property for a self-guided tour

Community & Parking Access

Restrict access to the community, parking lots, and garages. Add cameras and license plate recognition for insight into vehicles entering and exiting your property.
