Security Solutions
Fully Integrated Systems Delivering a Proactive Approach

CM3 BUILDING SOLUTIONS

THE WELL-BEING AND SAFETY OF YOUR OCCUPANTS ARE AT THE CORE OF EVERYTHING WE DO

For more than twelve years, customers have relied on the integrated, innovative security solutions from the experts at CM3.

We are the region's leading, full-service, security solutions provider. From our offices in Fort Washington Pennsylvania, we design, install, and service custom, fully-integrated security solutions for hundreds of public and private organizations in our community.

Deployed with an open-systems approach for future expansion and flexibility, our systems integrate with other life-saving technologies and adapt as your needs evolve.

The systems and solutions we recommend are proactive, not reactive, designed to deliver security before it is needed.

INNOVATION. EXPERIENCE. EXCELLENCE.

From schools and hospitals to township, religious, and commercial buildings, our security solutions leverage the industry's leading technology, and our consultative, design-build approach ensures that every solution is created to satisfy each customer's unique needs.

- » Total turnkey security systems
- » Professional in-house design and installation
- » Comprehensive systems integration capabilities
- » Dedicated engineering and project management team
- » Experienced service technicians and supervisors

- » Direct factory relationships
- » Open systems architecture
- » Maintenance agreements
- » Monitoring services
- » Extensive inventory of service parts

Wireless Locks

Leveraging open-systems technologies (either cloud-based or on-premise), we install industry-leading access control systems that scale to the changing needs of your facility.

With experience working on 10+ access control systems, our engineering and security experts excel at delivering interoperability and can fully integrate your access control with other systems — whether they are legacy systems or new solutions we deploy.

» One-touch building lockdown capability

» Seamless mass notifications

» Multiple customized access levels

» Visitor management

» Door status monitoring
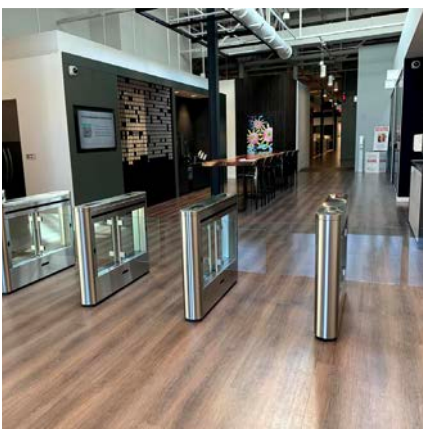

» Video surveillance system integration

» Mobile alerts

Cloud-Based Solutions
Control access from anywhere - desktop, mobile, and custom web - and enable identity information exchange with multiple directories and database types.

On-Premise Solutions
Achieve exceptional flexibility, complete customization, and local data storage with all hardware and software installed, maintained, and updated on your premises.

VIDEO SURVEILLANCE

We provide a wide range of video surveillance systems to meet your unique needs, whether your project is a single building or multi-unit campus. Using both traditional analog (CCTV) and cloud-based products, the cameras we install deliver pristine video footage, realistic contrast, color representation and smooth, natural movement – even in darker settings.

And, because we curate the industry's leading-edge technology and award-winning manufacturers, our systems leverage artificial intelligence and video analytics to deliver a proactive security posture.

Analog & Cloud-Based systems

Artificial intelligence

Video analytics

Our video surveillance systems not only provide the level of image detail you need but are also built with the intelligence to help you make sense of what you're seeing.

ARTIFICIAL INTELLIGENCE

» License plate recognition

» Weapons detection

» Gunshot detection

» Facial recognition

» Physical attributes

» Aggressive behavior detection

» Slip and fall

ANALYTICS

» Occupancy counting

» Line crossing

» Loitering

» Direction detection

PUBLIC ADDRESS

With a comprehensive suite of public address solutions, we deploy technology that lets you communicate quickly and seamlessly to large groups, whether that is across a campus or within a building.

Our flexible, easily-integrated solutions can often work with existing equipment and can readily scale to your evolving needs.

BELL SCHEDULES
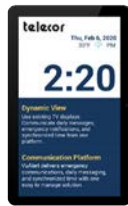

DIGITAL SIGNAGE

DIGITAL LOUDSPEAKERS

EMERGENCY DISPLAYS

CRISIS COMMUNICATIONS

Communicating during a crisis — whether it's medical or safety-related — must be intuitive, accessible, and immediate. That's why we deploy several industry-leading and award-winning systems to address different occupant environments — within a building, a campus or a complex.

PULL STATIONS

WEARABLE PENDANTS

EMERGENCY CALL BOXES

COMPUTER-BASED PANIC BUTTONS

FIRE ALARM & LIFE SAFETY

From initial system design and installation to ongoing test and inspection services, CM3 brings decades of direct industry experience to ensure that your fire alarm and life safety systems are installed to code, project specification, timeline, and budget.

- » New construction and existing facilities
- » Service for most major fire detection product lines
- » Initial site survey
- » Installation (Award-winning Kidde fire alarm systems)
- » Design and engineering to local and state fire codes
- » Code-compliant test and inspect services
- » Optional maintenance and support
- » Central Station Monitoring services
- » Licenses in NJ, PA, and DE

INTRUSION DETECTION

Deploying the industry's latest technology, we design, install, monitor, and service intrusion detection systems for all facilities, regardless of size or complexity.

We have experience working with most major manufacturers, and we are a Bosch-certified systems integrator.

We leverage best-in-class, open protocol technology across your system. This enables flexibility and scalability as your needs evolve and ensures that you are not locked into a single manufacturer or provider.

- » Perimeter detection
- » Glass breakage sensors
- » Panic buttons
- » Motion detectors

- » Intelligent lighting
- » Wireless and hard-wired sensors
- » Cellular and internet communications
- » 24/7 Monitoring services

ADDITIONAL SERVICES

CM3 provides a complete portfolio of security solutions for your facility. Additional services include:

- » Gates, barriers and window film to provide additional physical deterrents
- » Vape detection devices
- » Visitor management platforms
- » Video intercom
- » Optical turnstiles

INTEGRATED SOLUTIONS

Leveraging smart, open architecture solutions, CM3 excels at advanced technology integrations, which allow all systems to function as a single entity.

This cohesive approach provides highly proactive information, greatly enhancing your ability to monitor your facility:

- » Enhanced automation reduces the need for human interaction & knowledge of system functionality.
- » Continuous supervision provides real-time crucial information to key administrators.
- » Single-touch action enables simultaneous actions and minimizes response time.

LOCKDOWN SYSTEMS

CM3's lockdown solution enables you to launch multiple systems from the single strike of a button. These include launching a pre-recorded PA message, altering the access control system rights so only selected first responders and administrators can enter the facility, generating automatic notification to the police department, launching strobe lights throughout the facility, and sending text messages with mapping to indicate where the alarm was activated.

ADDITIONAL INTEGRATIONS INCLUDE:

Access Control Systems

Access Control Systems are connected to intrusion and camera systems, creating a proactive notification system. Should a door be ajar or forced open, an automatic notification with live and prerecorded video can be sent to key personnel immediately.

Security Cameras

Camera feeds can be layered onto a visual facility map for continuous monitoring from the dashboard. During an alarm, first responders and facility leaders can bring up those cameras to see a live feed.

Intrusion Alarms

Alarms sound when doors are inappropriately opened. Door locks are engaged from the dashboard or mobile device, or they can be engaged automatically depending upon the type of alarm that has been triggered.

Mobile and PC Notification

Alerts can be sounded and displayed on all devices automatically. Live updates can be sent to all stakeholders.

ACTIVATION DEVICE

- Panic buttons
- Mobile devices
- Artificial intelligence
- Door status switches (i.e., door forced open)
- Phone systems
- PC and software triggers
- Weapons detection devices
- Gunshot detection devices

LOCKDOWN SEQUENCE

Activation Device Initiated

Launches a strobe system

Generates PA system announcement

Changes access control rules; allowing only admin and first responders to enter facility

Provides associated video in the area of the event

Communicates to local authorities and key personnel
