

Building Automation Systems

Modernization Solutions for Legacy Products

With the continued evolution of IoT and building modernization technologies, **many legacy building automation products no longer have manufacturer support.**

These products include:

- » Robertshaw DMS
- » Barber-Colman / Invensys / Siebe Network 8000

Each of these products experienced an end to their commercialization 15 – 20 years ago. As a result, new replacement parts are not available, which limits replacement parts and controllers to remanufactured or refurbished parts. Remanufactured and refurbished parts do not always carry a factory warranty and are not always reliable. Additionally, cybersecurity risks, inefficiencies, and incompatibilities are an ongoing concern.

With 40 years' experience in building automation systems, CM3 can assist you in evaluating viable options and developing a long-term plan for your systems.

We are confident that together we can develop a migration and modernization plan that will be acceptable to your stakeholders.

Protecting your Investment, Building for the Future

CM3 Building Solutions has been delivering building automation and HVAC systems for 40 years. We recognize the exceptional investment and integration of your legacy systems, and we understand the challenges in modernizing them. That's what makes us uniquely qualified to guide your migration path.

Consultative Approach

As an experienced systems integrator, we are your consultant. Our approach is to respect your existing investment and work to utilize as much of it as possible, while balancing that with future system health and viability.

Strategic Perspective

Because we understand how your building automation and HVAC system can and should fit within the broader picture of your overall building solutions, we can identify a path forward that is grounded in real world application and tailored to your unique needs.

Broad Experience

We have extensive experience working with virtually every major legacy system on the market. This knowledge gives us an intimate understanding of the limitations of each brand and piece of equipment, so we can confidently recommend the best path forward for migration.

Let CM3 help you achieve long range planning, engineering, and modernization for your existing building automation systems

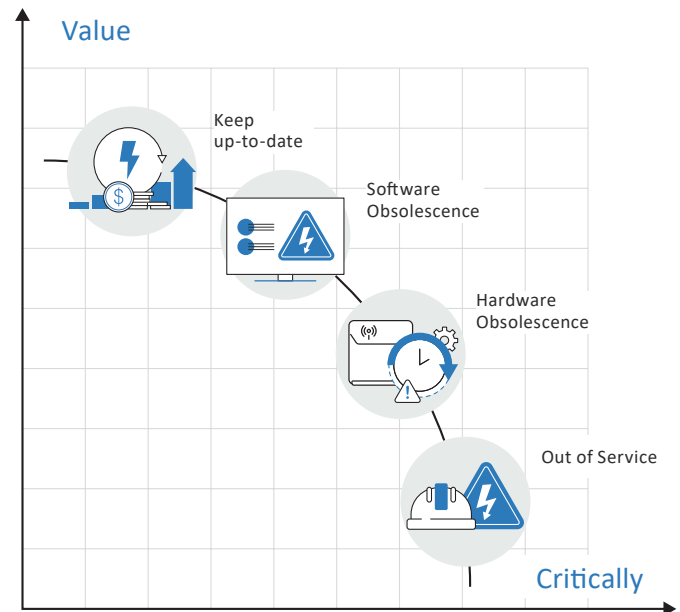

CM3 Building Solutions has the tools and pathways to seamlessly modernize your building automation system with minimal disruptions to your daily activities.

Our experienced field technician team understands the historical and current complexities of your system. And, our building automation migration experts incorporate products from many industry leaders to deliver a solution tailored to your specific needs, budget, and timeframe.

Benefits to updating your BAS

- » Open and scalable integration: system-to-system and system-to-device
- » The latest IP-enabled infrastructure, hardware and software
- » Access to cloud-based value-added services and insightful analytics
- » Features to address flexible building needs and new ways of working
- » Cybersecurity features are designed-in for enhanced resiliency

Waiting to upgrade your BMS increases the risk to building operations.

We provide a complete solution for your buildings with a flexible approach to meet your budget and timelines.

Our modernization approach can be phased to ensure minimal business disruptions while enabling you to take advantage of the latest building technologies as soon as the process begins.
