

# Managed IT Solutions

## Watchguard® Mobile User Security Services

CM3 Building Solutions provides experienced managed Information Technology solutions for your business or facility. We curate the industry's leading products and services to bring the best thinking to every project, and we custom build solutions that fit your business and budget.

We are a proud provider of WatchGuard DNSWatchGO, a cloud-based service that provides domain-level protection, content filtering, and integrated security awareness training to keep your users safe when they travel outside of your secure network perimeter.

When critical alerts are seen, WatchGuard's team of security experts performs a tailored analysis of the potential threat, following up with an easy-to-understand accounting that includes detailed insights about the potential infection. When a user clicks a malicious link, DNSWatchGO automatically redirects them to a safe page and offers resources that reinforce security education.

### **CLOUD-BASED MANAGEMENT**

As a 100% cloud-based solution, DNSWatchGO is easy to deploy and manage, saving you time and money. There's no hardware, and no need to update software manually. Devices deploy in minutes, quickly gaining visibility into internet activity wherever you user goes. Centrally manage DNSWatch policies for all of your users on-and-off-network.

### **STRONG SECURITY AT EVERY LAYER**

Uniquely architected to be in the industry's smartest, fastest, and most effective network security products, WatchGuard solutions deliver in-depth defenses against malware, ransomware, botnets, trojans, viruses, drive-by downloads, data loss, phishing, and much more.

### **DNS-LEVEL PROTECTION FOR USERS ON THE GO**

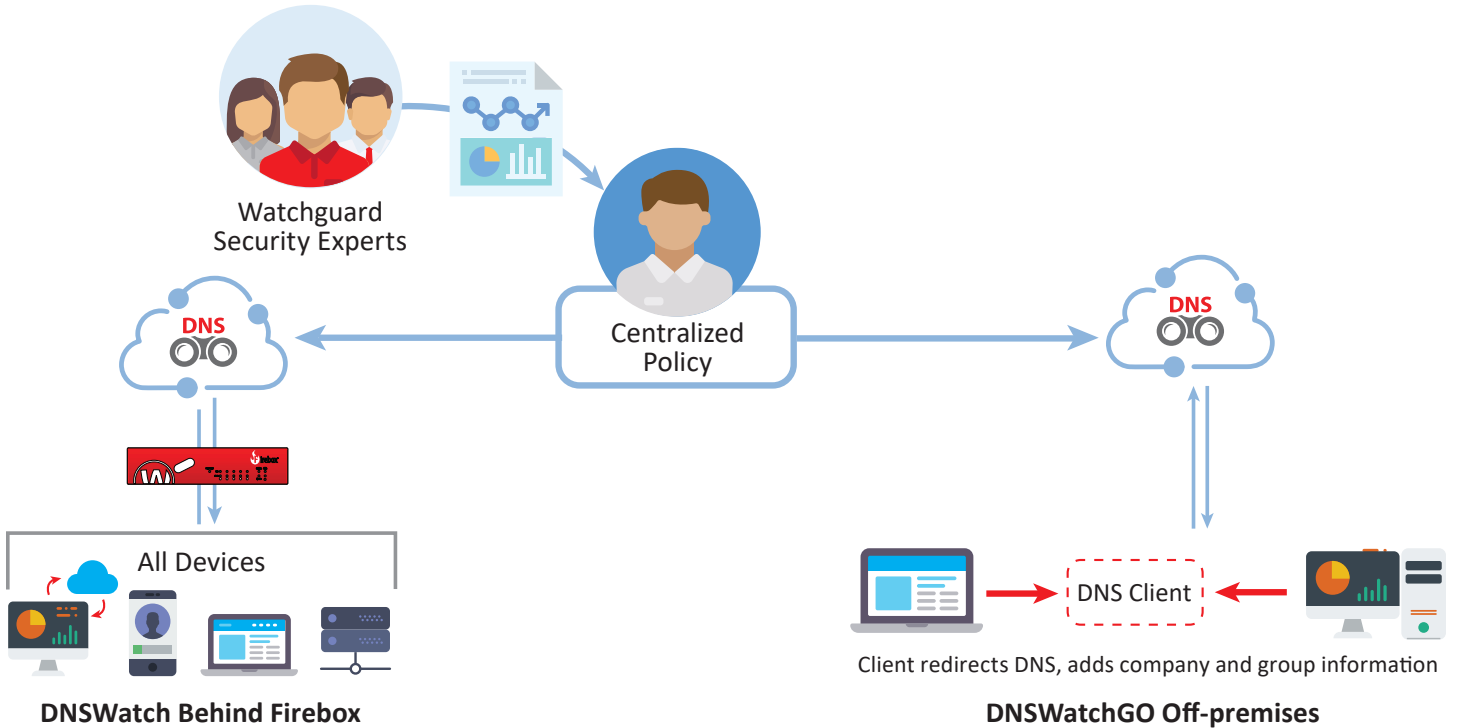

- > DNS-level detection, providing an additional layer of security to block malicious DNS requests
- > Offers detailed information on the attacker, type of attack and attacker goals without requiring you to comb through logs
- > Automatically protects end users from phishing attacks
- > 100% Cloud-based, making it easy to deploy and manage, saving you time and money
- > Provides immediate phishing education to heighten end user awareness after an attack
- > Complements Reputation Enabled Defense and WebBlocker to block malicious threats

## PROTECTION ON THE GO

Phishing, malware, and ransomware represent some of the most serious threats to a business's security, and employees are more vulnerable when they are outside of your secure perimeter. DNSWatchGO makes it easy to defend your business wherever your users go. By proactively identifying DNS requests bound for malicious content, DNSWatchGO stops risky clicks from becoming major security incidents. When your user clicks a link or enters a web address in their browser, DNSWatchGO monitors and correlates the DNS traffic against our intelligence feeds, identifying and blocking connections to domains owned by the bad guys.

## OFF-NETWORK VISIBILITY AND ENFORCEMENT

As users become more mobile you lose visibility into their Internet activity, creating a significant blind spot in your defenses. DNSWatchGO gives you instant visibility and control over the web activity occurring on devices both inside and outside of your network, allowing you to enforce web content policies to keep users away from the areas of the web that could threaten your business. Easily establish policies for your users based on 130 pre-defined blocking categories, and fine-tune access by individual users or groups.

## TACKLE PHISHING WITH AUTOMATED TRAINING

90% of attacks begin with a successful phishing email that tricks users into clicking a link or downloading a file they shouldn't. DNSWatchGO is the first security service to provide phishing protection and education wherever your users go, allowing you to take advantage of those teachable moments when the lesson is most likely to stick. When an end user clicks on an email or link that DNSWatch has identified as a phishing attempt, they are redirected to an interactive video that educates on the warning signs of a phishing attack and gives the user an action to take, such as reporting the offending email or speaking with a member of your IT team when they encounter a threat in the future.

## LOW TCO CLOUD SERVICE

DNSWatchGO, as a 100% Cloud-based solution, is easy to deploy and manage, saving you time and money. There's no hardware and no need to update software manually, while devices deploy in minutes, quickly providing visibility into Internet activity wherever your user goes. Centrally manage DNSWatchGO policies for all of your users.

## LIGHTWEIGHT CLIENT

DNSWatchGO is a lightweight client application that you install on portable computers that leave your network, such as employee laptops or student notebooks. Once installed, DNSWatchGO forwards DNS requests to the DNSWatch service for comparison to a database of malicious domains. DNSWatchGO supports Chrome OS, Windows 7, 8, and 10.
