

Telecor Public Address, Paging, Clock, & Mass Notification Solutions

ETHERNET-BASED AND HYBRID SOLUTIONS FOR EMERGENCY AND ROUTINE COMMUNICATIONS —

CM3 Building Solutions provides complete public address system installation, integration, and retrofit services for the Telecor line of communications solutions.

With +20 years' experience and +100 Telecor installations, our team understands legacy equipment and excels at systems interoperability.

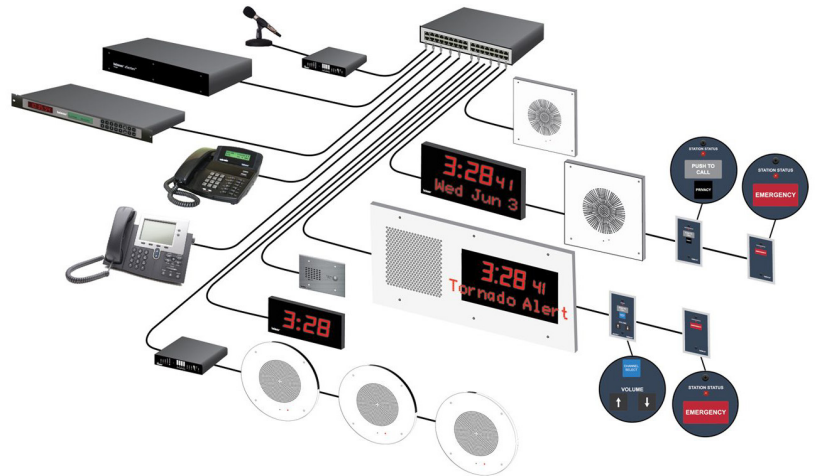

- We analyze your current technology to seamlessly and cost-effectively integrate existing equipment with new technology to enhance your day-to-day and emergency communication solutions.
- We integrate your public address system with emergency help points, lockdown, and fire alarm systems, so you have a comprehensive crisis communications plan.

INNOVATIVE MASS COMMUNICATION PLATFORM

The e-Series is an Ethernet-based communication system that passes power and data over a facility's existing Ethernet network, ensuring simplified network planning and easy installation.

- No head-end, central server or control equipment eliminates central point of failure risk.
- Hybrid capabilities for analog-based facilities enable longer-term transitions.
- Integration paths with access control, video surveillance, and phone systems.
- Flexible, endpoint equipment including call switches, speakers, clock/message displays, panic buttons, virtual call stations.

SCALABLE FLEXIBLE EQUIPMENT

MASTER CLOCK & MESSAGING

The eMH Master Clock and Message Host provide everything you need to schedule events, synchronize clocks, coordinate emergency drills, manage emergency operations and more.

- Remote viewing and managing
- Calendar view for easy scheduling
- Automated announcements and digital messaging

CALL STATION

The Telecor call station provides classrooms and common areas with call-in capability for routine messages, as well as strategically-placed panic switches.

- Call Assurance LED provides call confirmation
- Privacy, Do not Disturb and Emergency options

CLOCK SPEAKER & MESSAGE

Telecor provides a complete line of all-in-one displays—emergency, clock, speaker, strobes, and more. Features vary by product type but include:

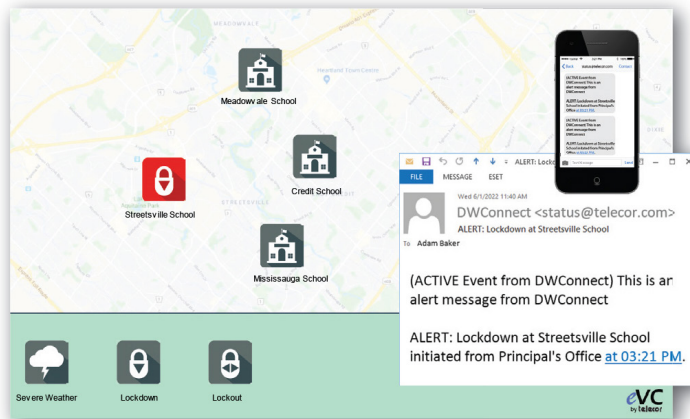

- Scrolling dot matrix marquee for emergency and routine messages
- Provides two-way talkback communications
- Strobe light with variable colors and flash rate

VIRTUAL CALL STATION & LOCKDOWN

The e-Call application creates a virtual call station on any Windows-based PC. Calls are placed by simply clicking on the virtual call button on the PC screen.

- Deployable on fixed and mobile PCs
- Two-way voice communications via classroom loudspeaker
- Supplements or replaces physical call stations
- Optional lockdown button

PAGING & MASS NOTIFICATION (DW CONNECT)

DW Connect allows for the centralized, district office to notify one or all schools of an emergency.

- Each school has local authority to engage
- A Graphical User Interface provides for seamless point and click activation
- Notifications can be sent by text or email to a pre-determined group

PANIC BUTTONS

Fixed:

Classrooms, offices, and common areas can have call buttons for routine messages as well as strategically placed panic switches for use in an emergency.

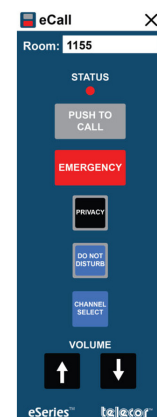

Mobile:

Configured users can have mobile device quick access/activation of public address and mass notification operations. With just a single activation, an entire building can be locked down in an instant.

Mobile Duress:

When initiated, ePanic pinpoints the alerts location on Visual Console, opens two-way communication to the closest network speaker, and provides live video feed from the facility's existing security cameras.

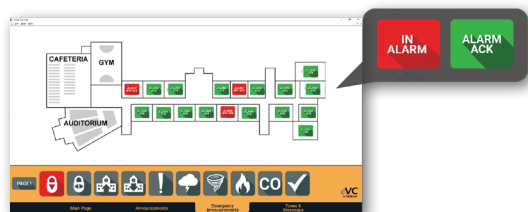

Virtual:

A virtual call station that provides call-in capabilities from a work station by clicking on the virtual call button on the PC Screen.

DESKTOP MANAGER

eDesktop generates a pre-programmed series of user operations from a single action, reducing time and increasing efficiency. Shortcuts can activate any eSeries function by clicking an icon. These include: alerts, audio distributions, coded and plain text messages, intercom operations, and more.

ALARM MANAGER

Provides real-time room status during a lockdown event in a facility. Occupants report their status directly to the front office or command center. Responders view the status on a room-by-room basis via a detailed facility floor map, using the Visual Console graphical user interface.

VISUAL CONSOLE

An easy-to-use graphical interface that works on any Windows-based PC. It provides a visual overview of the facility at a glance and enables management of the facility's communication platform.

- Visual overview of the facility including alarm acknowledgement by room
- Integrated video camera feeds
- Routine call processing, paging, audio program distribution, bell scheduling, and emergency operations

AREA OF REFUGE

ADA compliant fully supervised station with normal and emergency call-in capabilities from a single, rugged call station with high visibility.
